/note="Grgan: pooled brain, lung, testis; Vector:
pCWV-SPORTE; Site li Not; Site 2: EccRV (destroyed); RNA
source anonymous pool of 6 male brains, age range 23-27; l
male lung, age 27; and 1 male testis, age 69. Library is
oligo-dT primed and directionally cloned (EcoRV site is
destroyed upon cloning). Average insert size 1.8 kb,
insert size range 1-3 kb. Library is normalized and
enriched for full-length clones and was constructed by C.
Gruber (Invitrogen). Research Genetics tracking code
021. Note: this is a NIH MGC Library."

                              Direct Submitted (01-NOV-2002) National Institutes of Health, Mammalian Gene Collection (MGC), Cancer Genomics Office, National Cancer Institute, 31 Center Drive, Room 11A03, Bethesda, MD 20892-2590,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          through the I.M.A.G.E. Consortium/Linn. at: http://image.llnl.gov
Series: IRAK Plate: 84 Row: i Column: 5
This clone was selected for full length sequencing because it
passed the following selection criteria: Hexamer frequency ORF
analysis, GenomeScan gene prediction
This clone has the following problem: frame shifted.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            -i- FUNCTION: MAY PLAY A ROLE IN THE INITIAL GROWTH AND GUIDDANCE OF AXONS. MAY BE INVOLVED IN CELL ADHESION.
-i- SUBCELLULAR LOCATION: ATTACHED TO THE NEURONAL MEMBRANE BY A GPI-ANCHOR AND IS ALSO RELEASED FROM NEURONS.
-i- TISSUE SPECIFICITY: IN NEURAL TISSUES IN EMBRYOS, AND IN ADULT BRAIN, SPINAL CORD AND CEREBELLUM.
-I DEVELOPMENTAL STRAES: TRANSIENTLY EXPRESSED ON A SUBSET OF AXONS IN THE DEVELOPING RAT NERVOUS SYSTEM.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CONTACTIN S.

Taisoura C. P., Theodorakis C., Michaelidis M.T., Mamalaki C.,
Karagogeus D., Papamatheakis J.;
Submitted (NOV-1995) to the EMBJ/GenBank/DDBJ databases.
-!- FUNCTION: MAY PLAY A ROLE IN THE INITIAL GROWTH AND GUIDANCE OF
AXONS. MAY BE INVOLVED IN CELL ADHESION.
-!- SUBCELLULAR LOCATION: ATTACHED TO THE NEURONAL MEMBRANE BY A
GPI-ANCHOR AND IS ALES RELEASED FROM NEURONS.
-!- SIMILARITY: Contains 6 immunoglobulin-like C2-type domains.
-!- SIMILARITY: Contains 4 fibronectin type III domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    (POTENTIAL)

'Identification of CDNA clones encoding different domains of the basement membrane heparan sulfate proteoglycan.";
J. Biol. Chem. 263:16379-16387(1988).
-! FONCTION: This protein is an integral component of basement membranes. It is responsible for the fixed negative electrostatic charge and is involved in the charge-selective ultrafiltration properties. It serves as an attachment substrate for cells.
-! SUBUNIT: Purified perlecan has a strong tendency to aggregate in dimers or stellate structures. It interacts with other basement membrane components such as laminin, prolargin and collagen type

Basement membrane-specific heparan sulfate proteoglycan core
protein precursor (HSPG) (Perlecan) (PLC).
             Length 1040;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             TISSUE SPECIFICITY: FOUND IN THE BASEMENT MEMBRANES.
PTW. CONTAINS THREE HEPARAN SULFATE CHAINS AS WELL AS AND O-LINKED OLIGOSACCHARIDES.
SIMILARITY: CONTAINS 4 LDL-receptor class A domains.
SIMILARITY: Contains 1 ll laminin EGF-like domains.
